#### FEATURE

- 1. SMD metal film resistor
- 2. High reliability and stability of 0.25% and below per customer request
- 3. High performance of TCR: 15 & 10 ppm/K and below per customer request
- 4. Low current noise
- 5. RoHS compliant and lead free

# **APPLICATION**

- Medical equipment
- Measuring instrument
- Communication device
- Computer
- Printer

# DESCRIPTION

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For environmental soldering issue, the outer layer of these end terminations is a Lead-free solder .

#### • 4-digits marking for 2512, 2010, 1210, 1206, 0805 size

For E24+E96, each resistor is marked with a four digits code on the protective coating to designate the nominal resistance value. For values below  $97\Omega6$  the R is used as a digit. For values of  $100\Omega$  or greater, the first 3 digits are significant, the fourth digit indicates the number of multiple to follow.

#### Example

| RESISTANCE       | 100Ω | 6800Ω | 47000Ω |
|------------------|------|-------|--------|
| 4-digits marking | 1000 | 6801  | 4702   |

• No marking code for 0402 size

#### FUNCTIONAL DESCRIPTION

#### **Product characterization**

Standard values of nominal resistance are taken from the E192 & E24 series for resistors with a tolerance of  $\pm 1.0\%, \pm 0.5\%, \pm 0.25\%, \pm 0.1\%, \pm 0.05\%, \pm 0.01\%$ . The values of the E24/E192 series are in accordance with "IEC publication 60063".

# DERATING

PSA Approval Sheet う分グ

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

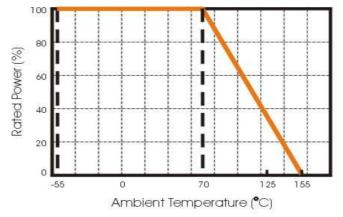

Fig.2 Maximum dissipation in percentage of rated power As a function of the ambient temperature

# MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

The end terminations guarantee a reliable contact.

#### **SOLDERING CONDITION**

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds within lead-free solder bath. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering profile and condition that provide reliable joints without any damage are given in Fig 3. and Table 1.
