High Precision Thin Film MELF Resistors

Size: 0207, 0204

*Contents in this sheet are subject to change without prior notice.

ASC_WMxxB&C

Aug - 2018

FEATURE

- 1. SMD enabled structure thin film resistor
- 2. High reliability and stability of $\pm 0.5\%$ and below per customer request
- 3. High precision of TCR: 50 & 25 ppm/°C and below per customer request
- 4. Best in class pulse load capability
- 5. RoHS compliant and lead free
- 6. AEC-Q200 compliant

APPLICATION

- Medical equipment
- Measuring instrument
- Communication device
- Power / Meter Converter

DESCRIPTION

A uniform alloy film is deposited on a high grade ceramic body (AI2O3) and achieved the desired temperature coefficient by annealing. Nickel plated termination caps are firmly attached on the ceramic body. It is achieved the target value by smoothly cutting a helical groove in the resistive layer without damaging the ceramic body. The resistive film is covered by a protective coating designed for electrical, mechanical and climatic protection. For environmental soldering issue, Nickel plated terminations receive a final pure tin on it. Four color code rings designate the resistance value in accordance with IEC 60062.

ASC_WMxxB&C

FUNCTIONAL DESCRIPTION

Product characterization

Standard values of nominal resistance are taken from the E192 series for resistors with a tolerance of $\pm 1\%$, $\pm 0.5\%$, $\pm 0.25\%$, $\pm 0.1\%$. The values of the E192 series are in accordance with "IEC publication 60063".

DERATING

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

Fig.2 Maximum dissipation in percentage of rated power As a function of the ambient temperature

MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Cylindrical placement can be on ceramic rods and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

The end terminations guarantee a reliable contact.

SOLDERING CONDITION

The robust construction of cylindrical resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds within lead-free solder bath. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering profile and condition that provide reliable joints without any damage are given in Fig 3. and Table 1.

PULSE LOAD PERFORMANCE:

Single Pulse :

Single Pulse for $R \ge 10 \ \Omega$

50 rectangular pulse amplitudes are applied to the component at intervals of 60seconds, permissible the resistance to be varied by \pm (0.5% R + 0.01 Ω).

Continuous Pulse for $R \ge -10 \ \Omega$

Continuous load is a pulse period generated by the repetitive rectangular pulse amplitude, the applied power dissipation is at a rated power of 70 ° C. Permissible the resistance to be varied by $\pm (0.5\% \text{ R} + 0.01\Omega)$.

Page 10 of 12

ASC_WMxxB&C

Pulse Voltage :

According to IEC 60115-1 4.27 1.2 / 50us use 5 pulses at 12sec intervals pulse shapes test resistor, permissible the resistance to be varied by $\pm (0.5\% \text{ R} + 0.01\Omega)$.

ASC_WMxxB&C

Approval Sheet

10 / 700us Pulse

According to IEC 60115-1 4.27 10 / 700us use 10 pulses at 60sec intervals pulse shapes test resistor, permissible the resistance to be varied by \pm (0.5% R + 0.01 Ω).
